token.json	295 byte	Hari ini 15:16	text/x-generic	0644

4. Klik tombol **Click Here -> Izinkan**

Authorisation URL: [Click Here](#) Please visit the URL above and then save the given value into config.php

5. Copy akses token

Masuk

Salin kode ini, beralihlah ke aplikasi dan tempel di sini:

[4/cT5lPhpvBxJYNIQdqWok06FCrFz6lRgJwrxhAS4RKMM](#)

6. Ganti value variable **\$authCode** di file **config.php** dengan akses token yang baru

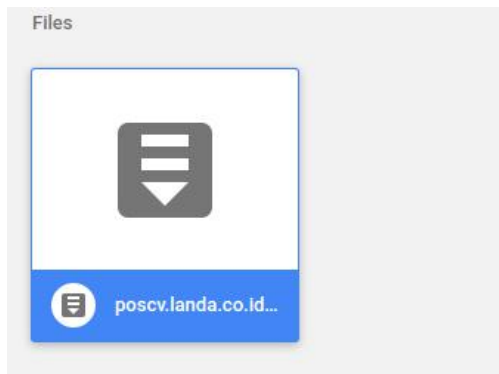

```
$clientId      = "333815137766-1dhptqe5fr80u0gk6rcd9kf1pdbqk5sj.apps.googleusercontent.com";  
$clientSecret  = "G0YZ71TJg_yy9YUy_2uwPwIS";  
$authCode      = "4/DfPP-7DQnT9JBxoF3ioFTuMY5xcGLACIMpmzPg9PKM";  
$requestURI    = "urn:ietf:wg:oauth:2.0:oob";
```

7. Setting koneksi database yang akan di backup pada file **config.php**

```
7  $dbList = array(  
8      array(  
9          "host"      => "localhost",  
10         "username"  => "root",  
11         "password"  => "qwerty",  
12         "dbname"    => "landa_pos_dpt",  
13     ),  
14     array(  
15         "host"      => "localhost",  
16         "username"  => "root",  
17         "password"  => "qwerty",  
18         "dbname"    => "landa_pos_anaina",  
19     ),  
20     array(  
21         "host"      => "localhost",  
22         "username"  => "root",  
23         "password"  => "qwerty",  
24         "dbname"    => "landa_pos_edward",  
25     ),  
26 );  
27
```

8. Untuk menjalankan backup ke Google Drive jalankan file **backup.php**

9. Database yang dibackup dijadikan 1 zip berdasarkan domain (**namadomain_tanggalbackup.zip**)

10. Buat crontab untuk eksekusi file **backup.php** setiap hari
